Automatic Inlining: Automatically load source and target layers when working with multiple drawings, without further drawing steps. Add layers and objects to one drawing while they are still in another drawing. **Drawing Updates:** Quickly and easily track and update a drawing's many revisions. Perform annotation updates such as adding annotations and labels with a single click. Revisions can be organized and labeled with tags, and the user can easily switch between the different revisions. (video: 1:24 min.) **Layer Properties:** Find the best properties for existing layers. Draw well-placed and well-organized tools with the new toolbox, which floats near your work area and displays the most common tools. The toolbox can be resized and repositioned, so you can better see and access your tools. You can also hide and display toolbox items. Save the progress of the drawing. With the new "Save the Progress" dialog, you can save the current drawing state and any new annotations or actions to a file on your computer. You can also save the most recent auto-saved state in a template, so you can quickly restore your drawing to the same state. **Automatic Updates:** Easily navigate the latest changes and automatically update the drawing.
