# CRACK UCANCAM V97

**Download**

Message: About parameter parameter ucancam send gcode with parameter variable (so that I can change parameter value on machine controller)... But I don't know how to get parameter value change in gcode. I have tried various things, e.g. SetValue(ucancam, gcode, n); but it tells me that the parameter value does not exist. I tried using n is a variable which doesn't work. I know that I get an error that value is not set when I try to gcode with a parameter variable (which is UCanCam.parameter). I tried several times but it doesn't work.
