first CAD program to bring drafting to the desktop. It is used for mechanical, electrical, structural, and architectural design projects. Released in 1982 as an add-on package for desktop publishing, AutoCAD set the standard for desktop CAD drawing software. Using a point-and-click interface, AutoCAD allows designers to drag, drop, and create blocks, text styles, and other drawing objects. Each drawing is composed of layers and components, and can be edited or

modified freely. In the early 1990s, Autodesk developed the DWG (drawing) format, which is based on the PostScript page description language (PDL). Although DWG is used for all types of design drawings, it was created as a universal file format for CAD. AutoCAD from 1976 to 2015. Since the release of AutoCAD in 1982, Autodesk has released three major versions. At first, Autodesk's version numbering was tied to AutoCAD's release. The first version of AutoCAD was named

AutoCAD Release 1 (A1) for release date and November 1982. The second version was named AutoCAD Release 2 (A2) for release date and December 1984. The third version was named AutoCAD Release 3 (A3) for release date and December 1987. The first three versions were limited to mechanical drafting. Then, in 1990, Autodesk released the DGN (design graphics) format that can be used for architectural, engineering, and construction drafting. In 2004

Tian Yulan, the head of the U.N. Human Rights Council's independent expert panel on the situation in

China's Xinjiang Uighur Autonomous Region, makes a statement at the U.N. Human Rights Council in Geneva, Switzerland, March 11, 2017. REUTERS/Denis Balibouse In a report presented to the Geneva-based council, U.N. Human Rights expert Tatyana Lokshina said it was crucial for the U.N. Human Rights Council to continue its work. "The situation in China's Xinjiang Uighur Autonomous Region is getting worse as the Chinese authorities persist in

tightening their grip," said Lokshina, a Russian government adviser. The Xinjiang region, in China's far west, is home to the Muslim Uighur ethnic minority, who complain of cultural suppression and political persecution by the government. Tian Yulan, the Chinese government's pointman on the issue and head of the U.N. experts, criticised the council for focusing on individual rights as opposed to addressing structural problems. "China's repeated refusal to

cooperate with the Human Rights Council gives rise to concern that Beijing wants to conceal the situation in Xinjiang, and to obstruct the work of the Human Rights Council," Lokshina said. "The result is a situation in which the rights of the people of Xinjiang are neglected." The Xinjiang regional government said in a written reply to the experts that it had made "concrete and tangible achievements" in areas including employment, social a1d647c40b
