The product is presented through the Lens tool. The Lens interface allows analysts to view multiple data sets and signatures, each mapped to specific collection sensors and area of coverage. It uses core sign-analytics to manipulate data and run algorithms. Signature Analytics (SA) is the core feature. It allows the user to define data sets and signatures to run against the data sets. It can also export signatures to.NET. Viewing and manipulation of signatures and data sets. Signature types can include Binning, Kolmogorov Complexity, Histogram Distribution, Permutation Histogram Distribution, Growth, Kolmogorov Complexity, and Shannon Entropy. Based on the output, Opticks Product Key can generate reports. Opticks saves and exports the reports to PDF. The software is capable of producing several types of reports, including: Thresholds Area Maps Slice Views Supported Platforms It supports all.NET platform including Windows, Linux and Mac. Opticks provides a Graphical User Interface (GUI) for running algorithms on data sets. It is a visual environment where the analyst can interact with the data set. Schema: The schema consists of a Data Table that contains all of the data in the data set. The attributes of this table are labeled with the type of data contained in the column. For example, "Max Temperature" is a float attribute with the data type of "Signed Int" or positive or negative integer. The data types are as follows: [[[[[[[Output: When running an algorithm, Opticks generates a final data set with the same attributes as the input data set, but in addition has the signature results generated by the algorithm.
