User interface The user interface (UI) of AutoCAD is accessed by the drawing commands. After selecting commands from menus, commands appear in a drawing environment on the canvas as lines, points, text, or images. The user typically manipulates the drawing on the canvas, and the screen image is automatically updated. Commands are organized into menus that allow the user to browse through them and select commands. Creating a new drawing and the associated dialogs The user is prompted to create a new drawing. The dialog boxes for selecting the type of drawing to create, and settings for the new drawing, are displayed. Default setting for the selected drawing type The dialog boxes shown in figure 1 show a default setting. Figure 1. A typical dialog box for creating a drawing. If the drawing type is not specified, the default setting is "Profile-Based." If the drawing type is not specified, the drawing type is determined by the most recently opened drawing type or by the first drawing type opened after the drawing type is selected. More information about the drawing type: AutoCAD Architecture There are three ways to create a drawing in AutoCAD: By using a predefined template; By dragging objects from an object library; By placing objects on the canvas or from a digital file. Figure 2. AutoCAD default settings. Figure 2. The first drawing is a simple house profile. Figure 2. The drawing type is set to "Profile-Based." The default drawing template is "Acad Profile Base." Figure 3. The drawing type is set to "Project-Based." The template is designed to create drawings of buildings, furniture, and signs. You can create additional templates from the command line or by using standard drawings to create a new template. Creating a new drawing and a new template The user can create a new drawing. The system prompts the user to choose a template. The user can select a default template (figure 4) or select a specific template (figure 5). AutoCAD Architecture: Create a New Drawing Figure 4. Data interchange One of the most powerful features of AutoCAD is its ability to export drawings in the industry standard CAD exchange format: DXF—for import into other CAD software programs DWG—for import into other CAD software programs AutoCAD's ability to import and export in DXF, DWG, DWF, PBF, ARX, DWLS, and more makes it the go-to CAD software for those in the CAD industry and those who work with CAD as their primary or secondary means of communication. CAD developers who use AutoCAD can focus on building better and more powerful features for AutoCAD, as AutoCAD can import and export to their own workstation without interference. The feature also permits the distribution of AutoCAD's drawings via FTP sites or the Internet. Data versioning AutoCAD's data versioning feature allows a series of earlier versions of a drawing to be maintained in the same file. The oldest drawing in the file is called the baseline and is the reference for all subsequent drawings. If the drawing is updated, a new revision of the drawing is made with the new data. The previous baseline revision can be saved as a draft and incorporated into a new version. When all the different versions have been completed, the drawing is saved for distribution. Data versioning is supported through the use of sequence numbers. A number is assigned to each version; the first number is the baseline, and subsequent numbers are assigned to subsequent revisions. If a drawing is saved with an earlier number as a new revision, then the baseline revision is overwritten with the new revision. In this case, the new revision cannot be restored to the baseline revision. A sequence number indicates that a drawing has been updated. This feature can be used for history preservation and as a revision control system. For example, it can be used to retain the original design of a drawing when, for example, it is necessary to maintain multiple copies of the same drawing, or to control the rate at which changes are made to the data of a drawing. Data versioning is supported by the program and in certain drawings through the use of the Data Management System. Users can select which versions of the drawing to maintain, and specify whether they want to preserve the original baseline. If the drawings are built using the internal sequences feature, they will show sequence numbers in AutoCAD to identify the specific revision of each drawing. Data versioning can be useful when working on multiple ca3bfb1094

Change some values in config.ini file like: Set value: [autocad] Set value: [extension] Set value: [exefile] Set value: [exefile_size] Save config.ini and change the value of "User Name" Browse to the directory you have autocad.exe and run it. If you don't see anything in autocad, create a new drawing. When you see the toolbar, don't use it yet. Click on View tab > Make a Section. Then open file "New.dwg" Click on Window > Tools > Options > User Interface > Make a Section Drag and drop your file on it If you have problems with this step, copy this drawing somewhere (start of on a floppy). Save it as "test.dwg" or any extension you want. I recommend to save the file with.dwg extension. Open the file "test.dwg" with autocad.exe Do a right click on the layer with the Test section Select "Change section or plane view" Click on the "Auto-placement of the section in the viewsport" and set it to "Full size". And then: Right click > "Insert floating view" > "Standard view" Right click > "Annotate > Make a Section" Right click > "Save As" > "Save" Right click > "Apply" Open the.dwg file with autocad.exe Right click > "Insert" > "Floating view" > "Floor plan" Right click > "Save as" > "Save" Open the file with autocad.exe again Select the floating view "floating view" Click on "Copy view" Drag and drop your file on it And then: Right click > "Apply" Right click > "Edit> Copy view" Select a floor plan view or section view on your drawing. Move it to somewhere and let it float. In this example, I am dragging it to the bottom of the layout. Right click > "Edit" > "Copy view" Right click > "Apply" Select "Insert" > "Floating view" > "Up view" Right click > "Save as" > "Save" In this example, I am dragging it

Markup Assist offers real-time automatic assistance with common drawing tasks. Transform a drawing into an associative drawing by dragging and dropping objects from AutoCAD or your desktop. In addition to managing and scaling blocks, create and edit layer groups, align to grids, calculate volumes, and more. (video: 4:35 min.) Show me: AutoCAD continues to evolve to meet the needs of today's users. AutoCAD is designed to work with your tools, not against them. Now, AutoCAD is easier than ever to use to create 2D and 3D drawings. AutoCAD is also designed to help you get more out of your PC. For example, you can start your drawing without any existing drawings, and AutoCAD can suggest several default drawing options for you. Model Based Design: Add a virtual model, then complete your drawing with the ability to see a 3D preview of your work from any angle. No more "going back and forth" to your 3D model. (video: 4:35 min.) When you select a surface for your 3D model, AutoCAD displays a 3D model that works with the coordinate system of your drawing. Zoom and pan to any angle, to see your drawing in any viewing angle. (video: 2:15 min.) Convert to 3D Work with complete 3D geometry without leaving your 2D drawing. Converts 2D drawings to 3D geometry, and 3D geometry to 2D drawings. (video: 2:15 min.) Using the Transformation feature of 3D Modeling, you can align two or more drawings to each other. From there, you can align them to grids or to each other. Align the top or bottom of a solid feature to an edge or point on a different drawing. Align and mirror your drawings to help you create complex shapes. Linework AutoCAD still offers you the flexibility and speed you need to complete your design work. You can draw lines with the pen or drawing tools, or create a line with a dashed or dotted appearance. Move Objects Draw and redraw complex objects in a snap. Move an object to a new position with ease. Object Selection in AutoCAD gives you the ability to select only objects that you want, from one drawing to another. Draw Custom Shapes As you select
